TWWIOS

AI AGENT · SENDS

Relay

WhatsApp campaigns from one Excel sheet.

You start the conversation. Upload an Excel sheet and send promotions, offers and order updates on WhatsApp, and turn Instagram and Facebook comments into private messages. Replies and questions can be passed to Mira.

PRODUCT GUIDE

TWWIOS Technologies Private Limited. Figures in demos are sample data.
Prices in US dollars and may change before general launch.

WHAT IT DOES

WhatsApp campaigns and comment-to-DM

You start the conversation. Upload an Excel sheet and send promotions, offers and order updates on WhatsApp, and turn Instagram and Facebook comments into private messages. Replies and questions can be passed to Mira.

Who it is for

- Retail shops, salons, clinics and coaching institutes
- D2C and online brands
- Restaurants and travel agents
- Any business that sends offers or updates on WhatsApp

The impact: current way vs with Relay

~~Messages sent one at a time~~	**One campaign reaches the whole list**
~~Comments left unanswered~~	**Each comment gets a private reply**
~~Chats spread across phones~~	**One shared inbox**

Key features

- WhatsApp promotional campaigns from an Excel sheet
- Opt-in and opt-out handled automatically
- Instagram and Facebook comment-to-message (optional)
- Delivery, read and reply tracking
- Hand replies to Mira or your team

Pricing

Try with sample data

STARTER

$49 / mo

1,000 conversations a month

GROWTH

$149 / mo

10,000 conversations a month

Annual billing saves two months. Usage above the plan is billed at the plan rate. Taxes extra.

HOW IT WORKS

From your data to results, step by step.

1. **Connect your channels**
   WhatsApp number, Instagram and Facebook pages.
2. **Bring your contacts**
   Upload an Excel sheet or sync from your CRM, with opt-in recorded.
3. **Choose a message**
   Pick an approved template and personalise with columns from your sheet.
4. **Sent safely**
   Delivered in controlled batches that protect your number.
5. **Replies handled**
   Simple rules handle STOP and keywords. For real conversations, replies go to Mira or your team.
6. **Comments become chats**
   A comment on Instagram or Facebook gets a private message back.

Connects with

SYSTEM	HOW	WHAT IT DOES
WhatsApp Business Platform	Set up with our team	Verified number and approved templates.
Instagram and Facebook	Set up with our team	Connect your business pages.
Excel or CSV contacts	Self-serve	Upload with opt-in status.
CRM: HubSpot, Zoho, Salesforce	Set up with our team	Two-way sync of contacts and outcomes.
Shopify or WooCommerce	Set up with our team	Order and delivery updates.
Email campaigns	Set up with our team	From your own domain.

What the customer needs to start

- A business with Meta verification
- A WhatsApp number
- A contact list with consent
- Message templates, which we help write and submit for approval

BUILD STATUS · HONEST VIEW

What is built, and what is left.

The code in this zip is written but has **not yet been tested against the real external services** (Meta, Twilio, Razorpay/Stripe, Anthropic, accounting systems). Treat it as a working base for your developer, not a finished product.

Built in this zip

- ✓ Company accounts, login, password reset and team access
- ✓ Contact import from Excel/CSV with consent proof and opt-out handling
- ✓ Campaign planner with safety checks (template lint, risk score, send-rate limits, canary wave)
- ✓ Background sender, delivery/read/reply tracking via WhatsApp webhooks
- ✓ Instagram and Facebook comment-to-DM module
- ✓ Subscription billing (Razorpay) and email (Resend)
- ✓ Relay app screens (WaApp) and a clickable design sample

Left before launch

- → Meta Tech Provider approval and Embedded Signup tested end to end with a real number
- → Real campaign test: your own number + 20 consenting contacts
- → Stripe for USD billing (Razorpay is wired)
- → Shopify / CRM connectors (set up per customer)

Main API endpoints

- `POST /api/pulse/auth/signup, /auth/login` accounts
- `POST /api/pulse/contacts/import` Excel/CSV contacts
- `POST /api/pulse/campaigns/preview, /campaigns` check and send a campaign
- `GET /api/pulse/webhook, POST /api/pulse/webhook` WhatsApp events
- `POST /api/pulse/v1/send` trigger API for other systems

GO LIVE AND SELL

Steps to launch Relay.

1. Accounts to open

- Meta Business Manager (verified) + Meta developer app with WhatsApp product
- Meta Tech Provider review (2-6 weeks) - scripts in the main package docs/META_APPROVAL.md
- Razorpay (India) / Stripe (USD)
- Resend for emails
- MongoDB Atlas + a server (Render, Railway or a VPS)

2. Keys to put in `code/api/.env`

- `MONGODB_URI, AUTH_SECRET, ENC_KEY, PUBLIC_URL, CORS_ORIGIN`
- `FB_APP_ID, FB_APP_SECRET, WA_CONFIG_ID, WA_VERIFY_TOKEN, WA_APP_SECRET (Meta)`
- `RAZORPAY_KEY_ID, RAZORPAY_KEY_SECRET, RAZORPAY_WEBHOOK_SECRET, RAZORPAY_PLAN_STARTER/GROWTH`
- `RESEND_API_KEY, MAIL_FROM`
- `PULSE_ADMIN_KEY`

3. Run and test

- `cd code/api && npm install && npm start`, then open `http://localhost:4000/health`
- Test with your own data first, then one friendly customer as a free pilot
- Deploy with the Dockerfile on Render, Railway or a VPS, with MongoDB Atlas

4. How to sell it

One-line pitch: "You send one offer to 1,000 customers in two minutes, safely, and see who read and replied."

- Find 20 target businesses, offer a 15-minute demo with their own data
- Run a short free pilot and measure one number (replies, money collected, hours saved)
- Convert to the Starter plan, then offer the next agent once the first one is working
